Celebrate a Weekend of Bonnie Blue Butler at Marietta's Gone With the Wind Museum

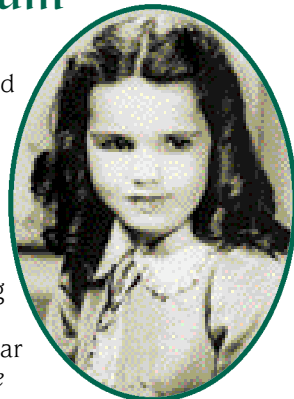

The Marietta Gone With the Wind Museum: *Scarlett on the Square* will host Cammie King Nov. 20–22, 2004.

Cammie King portrayed Bonnie Blue Butler in the 1939 film *Gone With The Wind*. She is one of only 12 living cast members from the movie classic.

Organizers of King's visit have planned several special events during her stay in Marietta. The festivities will include autograph signings, a barbecue and Tea With

Bonnie Blue Butler, an informative, insightful and humorous recounting of her memories of being in the movie, as well as a wealth of anecdotal material.

"I can't tell you how happy I am to be returning to Marietta," King said recently. "My visit last year with fellow *Gone With the Wind* cast members is a marvelous memory. I especially want to spend more time at *Scarlett on the*

Remaining Aware of How You Use Water Can Help You Find Ways to Save Money on Monthly Water Bills

Recent estimates by the U.S. Department of Housing and Urban Development indicate that U.S. residents use an average of 80 gallons of water per person each day. That adds up to more than 116,000 gallons of water a year for a family of four.

The majority of this water – approximately 74 percent, according to the U.S. Environmental Protection Agency – is used in the bathroom. Approximately 41 percent of the water consumed by an average U.S. household is used for flushing toilets. Bathing and bathroom sinks account for 33 percent of the water used in the average U.S. household. Laundry and cleaning take up another 21 percent of the water used indoors, while only about 4 percent is used in the kitchen.

Please keep this in mind when looking for ways to save water around your house. For example, you can save a great deal of water by replacing toilets with newer models. Standard toilets manufactured before 1980 use 4.5 to 7 gallons of water per flush and

those manufactured between 1980 and 1992 use 3.5 gallons per flush. By comparison, today's low-consumption toilets use only 1.6 gallons of water per flush.

If you can't replace the entire toilet, you can still save 0.6 gallons per flush by placing a displacement bag in the tank of your toilet. You will find displacement bags at most hardware and home-improvement stores. You can also get a similar benefit by filling a plastic bottle with sand, sealing it tightly and placing it in the tank.

Changing showerheads can produce significant savings as well. Standard showerheads use 4 to 7 gallons of water per minute, while low-flow showerheads use 2.5 gallons per minute or less.

Using your appliances effectively can also reduce water consumption in your home. A standard domestic washing machine uses 40 to 50 gallons of water per load and a dishwasher uses up to 25 gallons per load. By waiting until you have a full load before running

Square because I am so impressed with the caliber and design of the collection.”

The Museum houses more than 1,000 pieces of *Gone With the Wind* book and movie memorabilia that is privately owned by Dr. Christopher Sullivan. The collection includes the original Bengaline honeymoon gown worn by Vivien Leigh as Scarlett O'Hara in the film, an educational display dedicated to the African American cast members and a vast compilation of foreign editions of the novel.

The Museum and gift shop are open to the public Monday through Saturday, from 10 a.m. to 5 p.m. Standard ticket rates are \$7 for

adults, \$6 for students, \$6 for seniors 65 years and older, and children 8 years old and under are free.

these appliances, you can reduce overall water usage, therefore reducing your water bills.

You can also save a great deal of water by replacing leaky faucets and old washers. After all, a one-drop per second leak wastes 7 gallons per day. A steady faucet drip wastes

20 to 30 gallons per day or 11,000 gallons per year.

For more information on conserving water and keeping your water bill as low as possible, please visit www.marietta.gov or call (770) 794-5230. ⚡
